Dräger expands its patient monitoring portfolio to include the new Vista 120

Adding new innovative solutions to its monitoring portfolio to address the specific needs of high-growth healthcare markets in emerging economies

Lübeck, Germany – Dräger today announced the release of the Vista 120 patient monitor, which supports adult, pediatric and neonatal patients in a variety of care environments, including Intensive Care Units, Operating Rooms, Neonatal Intensive Care Units and Emergency departments.

The design and development of the Vista 120 was based upon the specific needs of the mid-market segment. With a bright 380 mm (15") color touch screen, the Vista 120 monitors a core set of essential parameters; including ECG, SpO₂, non-invasive blood pressure, respiration, temperature, invasive blood pressures and etCO₂, depending on the model. It is easy to operate, provides fast access to patient data and offers flexible mounting options to support a variety of workplace configurations.

“Dräger is sensitive to the medical requirements within the mid-market segment and the budgetary constraints that many hospitals face,” says Marita Klafke, President of Dräger Medical Systems, Inc. “With the Vista 120, we are pleased to be able to offer a patient monitor that offers essential monitoring capabilities and provides the Dräger heritage of quality at an exceptional value. It allows us the ability to expand our portfolio and affirm our commitment to drive new business in the newly industrialized countries.”

Part of a complete departmental solution

The Vista 120 can be used as a standalone monitor, or with one of Dräger’s complementary therapy devices – including ventilators, anesthesia machines or baby warmers as a comprehensive workstation solution for the ICU, OR, ED or NICU.
