Dräger Canada and Epiphany Cardiology announce collaboration

Industry leaders leverage strengths to better serve Canadian hospitals with ECG storage solutions

Richmond Hill, Ontario – Draeger Medical Canada, Inc. (DMCI) and Epiphany Cardiograph Products, LLC. are pleased to announce that the two companies have entered into a distribution agreement under which DMCI is licensed to sell Epiphany products and services exclusively into the Canadian marketplace.

Epiphany Cardio's Web-based product, Cardio Server, is the fastest growing ECG data management system in North America, communicating with over 100 devices, from over 40 vendors, in over 15 diagnostic modalities. Cardio Server is the winner of the KLAS Best in Category award for both 2009 and 2010.

"Draeger Medical Canada is proud to team up with this leading provider of 12-lead storage, serial comparison and archival systems," says Jeff Wilding, General Manager of DMCI. "Their open architecture allows for integration of virtually any manufacturer's 12-lead ECG, which will provide our customers greater flexibility with their existing cardiology devices."

"Cardio Server is 'pure-Web' – which means that users can read ECG data from anywhere in the hospital, the office or home using a Web browser," says Russ DeRemer, Founder and CEO of Epiphany. "Together with Draeger Medical Canada, we look forward to working with many Canadian medical centers."

Cardio Server is a hardware-independent application that is currently being used by more than 300 customers throughout North America. It is compatible with the hospital's existing protocols for back-up, disaster recovery, service packs, OS updates, anti-virus programs, and runs on VMware. Epiphany provides lifetime upgrades to customer applications under a standard support agreement and full service support for all Canadian installations.
