Dräger publishes its sustainability report 2022

- 18 percent reduction in CO₂ emissions compared to the previous year
- Internal information platform for sustainable projects ensures transparency and exchange among the employees

Lübeck - Dräger, an international leader in the fields of medical and safety technology, today published its sustainability report for 2022. In the annual report, the company provides information on how it implements sustainability and has integrated it into its organization. Dräger meets the growing demands of its customers and investors by means of concepts, measures and goals.

The report focuses on the four areas of economy, the environment, social issues and the supply chain. Over the past year, the company has continued to develop each area. In 2022, for example, Dräger succeeded in reducing its CO₂ emissions by 18 percent compared to the previous year (2022: 76,698 t; 2021: 93,739 t). Since 2015, the company has been able to reduce direct and indirect CO₂ emissions by around 38 percent. In the EcoVadis CSR rating,¹ Dräger retained its gold status in 2022 and scored among the top one percent in the industry. In addition, Dräger now obtains 88 percent of its purchasing volume of production materials from suppliers who have signed the company's own 'Code of Conduct for Business Partners'. This is an increase of seven percent compared to the previous year.

The report contains details of Dräger's sustainability initiatives, such as an internal information platform for ongoing or successfully completed sustainable projects within the company. Every employee can contribute to this platform and share projects. In this way, employees can benefit from each other's experiences and utilize them for their own ideas.

"Our guiding philosophy, 'Technology for Life', means taking responsibility. Through our products, we make a positive contribution to people and the environment," says Stefan Dräger, CEO of Drägerwerk Verwaltungs AG. "Our systems and processes also make sure that we protect resources and guard against potential risks from our business activities. But we also know that

¹ International assessment platform to determine sustainability along the entire supply chain
