### Keep a clear view at all times

#### New Dräger UCF FireVista thermal imaging camera

- **High image quality even under extreme operating conditions**
- **Quick and easy one-button operation**
- **Optimized for structural firefighting and victim rescue**

Lübeck – A thermal imaging camera provides firefighters vital orientation when smoke and darkness make visibility difficult. The Dräger UCF FireVista helps to better assess dangerous situations and provides additional safety during firefighting operations. Firefighters are provided with high image quality and a detailed overview of the situation in a very short time. During search and rescue operations, the camera can help locate victims quickly.

The Dräger UCF FireVista has been optimized for structural fires and ensures a clear view even in dense smoke and darkness. Thanks to its high thermal sensitivity, sources of fire can be identified quickly. The camera can recognize even the smallest temperature differences. The 3.5 inch display shows a clear contrast between walls, doors, and stairs.

#### Light and robust at a low price

The housing of the thermal imaging camera is robust and durable. It is also extremely resistant to heat, water, and dust. With a weight of 850 grams, the compact Dräger UCF FireVista is particularly light. It is controlled with just a single button, which makes it easier to use and saves time, even in critical situations.

The UCF FireVista is manufactured by Dräger Safety AG & Co. KGaA.
