

In many ways a better performance

The new Dräger Alcotest® 7000 improves breath alcohol detection for you on many levels: It works reliably at extreme temperatures. It gives you both mouthpiece and funnel tests within one device. And it transfers data in real time to app, printer and cloud.

The new Dräger Alcotest® 7000

- High measuring performance
- Connective solutions
- Saves time, efforts and money

Dräger

Raising the bar

Reliable Performance from -10 °C to 55 °C

Works even at extreme temperatures:
The patented heating system and the
high-end materials guarantee correct
results from -10 °C to 55 °C.

Reliable results up to 6 ‰

Dependable results up to 6 ‰ –
valuable especially in clinical use.
If this limit is further exceeded,
a symbol will be displayed.

Only one calibration a year

Many alcohol measuring devices
need to be calibrated every six
months, the Dräger Alcotest® 7000
holds up for twelve.

Your advantage: You'll only need
to collect and ship the devices
once a year. This saves time and,
most of all, money.

Data transfer in real time

Send data in real time to the app, the
cloud or the Dräger Mobile Printer BT.
Localisation and digitisation of
personal data and measuring results
make your work easier, too.

Pre-screening and screening in one device

The Dräger Alcotest® 7000 offers two test
modes: the mouthpiece and the quicker
funnel test. This saves time and effort.
If the funnel test is positive, just switch
to the mouthpiece for an even more
exact result.

Hygiene made easy

Stay safe: Reduce the risk of infection
by removing the mouthpiece safely with
just the snap of the finger. Furthermore,
the test is carried out at a 90° angle to
prevent the test person from blowing in
the direction of the operator. Use a selfie
stick for increased safety. Moreover, the
device's smooth surface allows for easy
and hygienic cleaning.
