

# Capabilities Statement

## Anesthesia Product Portfolio

Improving Critical Care drives everything we do at Dräger. For more than 100 years, our anesthesia machines have been trusted worldwide for quality and reliability. Our anesthesia solutions are designed to streamline workflow, improve clinical outcomes, and enhance patient and caregiver experiences.

### Core Competencies

#### IMPROVING OUTCOMES

- **Piston and turbine ventilation technology**, which can deliver highly precise tidal volumes to ensure proper ventilation<sup>1</sup>, even for neonates
- **Fresh gas decoupling** to protect the patient's lungs from unintentional high tidal volumes and pressures
- **Lung protective ventilation** capabilities with modes such as synchronized intermittent mandatory ventilation (SIMV), pressure support ventilation (PSV), airway pressure release ventilation (APRV)\*, and continuous positive airway pressure (CPAP) in Man/Spon.\*
- **Consistent user interfaces** to help reduce human errors and clinical training while enhancing the caregiver experience

#### PATIENT SAFETY

- **Fail-safe ventilation technology** that can provide mechanical ventilation with room air in the absence of central and cylinder gas supplies for continued care
- **Emergency manual ventilation** can be applied even when the machine is in the off position using all available fresh gases and anesthetic agent
- **Heated breathing systems** to help prevent potentially harmful rain-out, especially during minimal- and low-flow delivery
- **Infection control** with smooth surfaces and cable management to help reduce potential contaminants, plus a breathing system that can be accessed, autoclaved and serviced in a few simple steps

#### OPERATIONAL EFFICIENCY

- **Minimal- and low-flow technology**, which offers clinical, financial and environmental benefits; sampled gas is returned to the breathing system on all Dräger anesthesia machines
- **Automated self-testing** and system start-up to help save time and prevent delays
- **Standardized parts and consumables** including vaporizers, breathing circuits, soda lime, flow sensors and water traps

Dräger is a leader in anesthesia solutions in VA Medical Centers and DoD Military Treatment Facilities across the country.

Dräger has replaced older bellows technology with innovative piston and turbine ventilation technologies.

Dräger anesthesia machines are optimized for the efficient delivery of minimal- and low-flow anesthesia.

## CYBERSECURITY

- **Cybersecure data integration** to MHS Genesis, Cerner's Millennium, VistA and Dräger's Innovian®
- **RMF validation:** Dräger anesthesia machines have met RMF validation requirements of the DoD and have a certified Authority to Operate and Connect (ATO/ATC) to DoD

## TRAINING, SERVICE & SUPPORT

- **Ongoing support for Dräger equipment**, including AAMI-accredited technical service training and 24x7 US-based phone support
- **Team of clinical application specialists** and registered respiratory therapists who support customers on-site
- **Dedicated team of clinicians, technicians, and certified project managers** who ensure that installation and training attain the highest levels of customer satisfaction
- **Online training, tutorials, care protocols, and education modules** available 24/7 at [www.intensivecareonline.com](http://www.intensivecareonline.com)

## DRÄGER GOVERNMENT PROFILE

Dräger manufactures anesthesia equipment used in VA Medical Centers (VAMCs) and DoD Military Treatment Facilities (MTFs) and the sole provider of field-based military anesthesia machines, as well as a leading provider of critical care ventilators used in MTFs. Many VISNs have standardized on the Dräger Innovian® Anesthesia Record Keeping (ARK) system. Founded in 1889, Dräger is an international leader in medical and safety technology and is present in over 190 countries.
