

Decontaminable strap

Dräger X-plore® 8000

The decontaminable harness system can be combined with the Dräger X-plore® 8000 decontaminable belt to distribute the weight of the device more evenly. This version offers an easy-to-use transport system for applications requiring decontamination.

Decontaminable material

Performance that makes all the difference: its antistatic PVC-coated polyester raw material is resistant to the stresses generated by carrying the device. It can be cleaned and decontaminated to meet the most demanding environments.

A perfect match

Thanks to the combination of decontaminable shoulder straps and decontaminable belt, you can now have equipment that is perfectly suited to dirty environments over long periods of use.

Special fabrication

In order to meet specific decontamination requirements, Dräger offers this porting solution tailored to the European zone. This product has not been tested for use in ATEX zones.
