

Dräger Civil Defense Set

Drägererrør

Are you prepared to respond to a terrorist attack involving chemical weapons? In today's world immediate and accurate detection of toxic chemical agents is crucial. Dräger has developed an important new detection system not available from any other manufacturer – specialized sets that detect up to five different chemical agents simultaneously – in just five minutes.

Highlights

Easy handling

The air to be tested is simply inducted via an adapter with a gas sampling pump through five different Dräger tubes with direct indication simultaneously.

Low cost

The CDS is a very cost-effective option for the detection of chemical warfare agents – especially when compared to the alternative instrumental analytical measuring systems.

Immediate evaluation

The measuring result is indicated after only five minutes – this may save precious time.

Minimum training required

The method can be learned and practiced in a short time. Corresponding training sets are available.

Usable everywhere

Because the CDS can be operated with a hand pump, no additional power supply is required. The test can therefore be used without difficulty in most situations.

No calibration

No calibration is required.

Connective Products

Dräger accuro

- for spot measurements with a limited number of strokes
- integrated stroke counter for safe control
- easy to operate with one hand
- can be used in explosive areas

Dräger CDR 4500

- Full face mask for civil defense and protection
- Approved in accordance with NIOSH CBRN and EN-Norm
- Available in various sizes for a comfortable fit

Dräger M2000

- Dedicated full-face mask for defense forces
- Protection against biological and chemical warfare agents, and particles of radioactive substances
- Available in various sizes
