

Training

Authorised Gas Tester Level 1

The two-day course is designed to equip the participants with comprehensive knowledge and the practical skills necessary for clearance measurements before confined space entry operations. It covers the characteristics of ox-, tox- and ex-hazards.

Basic Information

Learning objectives

This course is designed to provide the delegates with the knowledge and competencies required to carry out gas testing of atmospheres in confined spaces for pre-entry and on an ongoing basis.

To provide those personnel preparing for a gas tester role with the knowledge to safely conduct gas tests for oxygen levels, flammable and toxic gases. In addition, this course also equips the delegates with the knowledge necessary to conduct gas testing within confined spaces and an awareness of associated confined space hazards.

Course content

- Legislative and regulatory requirements
- Risk assessments
- Safe systems of work and permits to enter
- Gases and their hazards
- Sampling considerations
- Theory and practice of gas detection and detectors
- Pre-entry testing
- On-going monitoring
- Interpreting and documenting results

Provided by Dräger Academy

The Dräger Academy has been imparting well-founded and practice-based knowledge for over 40 years. With

Basic Information

more than 110 authorised trainers and over 600 various thematic modules we are able to realize over 2,400 training courses per year. We look forward to welcoming you in person at the Dräger Academy—in our training centres around the world or at your site!

Commitment to quality

Our train the trainer concept ensures that the knowledge and the competency of our trainers are maintained at a uniform high level around the world. This means that international service companies with a global presence can rely on the fact that the Dräger training sessions provide the same level of knowledge to their employees at any location—around the world.

Blended learning—as flexible as possible

The content is presented in an application-based and varied manner. We combine conventional “classroom” training with practical exercises, realistic simulations and web-based online elements—a “blended learning” approach to enhance the learning experience and establish competency.

Facts

Target group

This qualification is required for those personnel working in an industrial environment who are to be involved with performing a test for oxygen, flammable and toxic gases up to and including working in confined spaces.

Re-accreditation	Certification is valid for two years
Learning method	Classroom training
Duration	2 days
No. of attendees	10
Venue	In one of the Dräger Training Centres or directly on-site

Certificates

Certified knowledge

The Dräger Academy uses the ISO 9001 quality management system.

Related Trainings

Authorised Gas Tester Level 2

The main focus of this training is to monitor flammable substances. Participants learn how to safely conduct gas testing in preparation for hot works. Also part of the agenda: regulatory and organizational requirements as well as interpretation and documentation of the results.

Authorised Gas Tester Level 3

The training will deepen the knowledge of gas testers involved in providing safety watch duties by the ongoing monitoring of a hot work site. It covers all relevant information on flammable gases focusing on the principles and practice of gas testing during hot work.

Related Trainings

Confined Space Entry

The hands-on simulation-based training prepares workers for entry into confined spaces and containers. Participants acquire all knowledge required to perform CSE work safely and efficiently. Special attention is given to gas measurement, personal protective equipment, and emergency procedures.

Confined Space Entry Rescue

When incidents occur in confined spaces, specialised knowledge is needed. Our realistic CSE rescue training combines concise knowledge with lots of practical exercises. The participants learn to perform CSE operations safely, make the right decisions in emergencies, and intervene with competence.

Basic H₂S Training

This H₂S Training gives an overview about the emergency response competency requirements for personnel working in potential H₂S environments. It covers the characteristics and the potential physiological effects of H₂S exposure as well as the use of detection equipment and compressed air devices.
