

# Innovian® IQ: Turning perioperative data into actionable reports

---

Innovian® IQ is a software solution that turns the data captured by Dräger's Innovian® Anesthesia Information Management System into meaningful reports that can drive clinical, quality, regulatory and business value for your hospital.

As your specialist in critical care, Dräger worked with facilities like yours to determine the types of reports most needed by hospital caregivers and administrative staff. This resulted in **32 pre-configured reports that can be easily modified, viewed, and saved in various formats. These reports can help boost operational efficiencies, reduce the cost of care and lead to improved patient outcomes.**

**Dräger**

Technology for Life

**Track Perioperative Performance and Patient Outcomes:** help improve the quality of care with access to the following variety of reports:

- Anesthesia case types
- Anesthesia methods
- Anesthesia procedures
- ASA status
- Quality outcomes

**Improve Staff and Operational Efficiency:** work to reduce wasted time with insight to the operational time spend in various areas such as:

- Utilization reports for perioperative caregivers
- Surgical case counts per OR

**Monitor Patient Throughput:** help ensure staff, patient, and family satisfaction with real-time visibility to patient status and location via:

- Clinical Dashboard
- Family Dashboard

**Integration with the Innovian Database:** simplify report gathering with access to the following external reports already populated by Innovian Anesthesia:

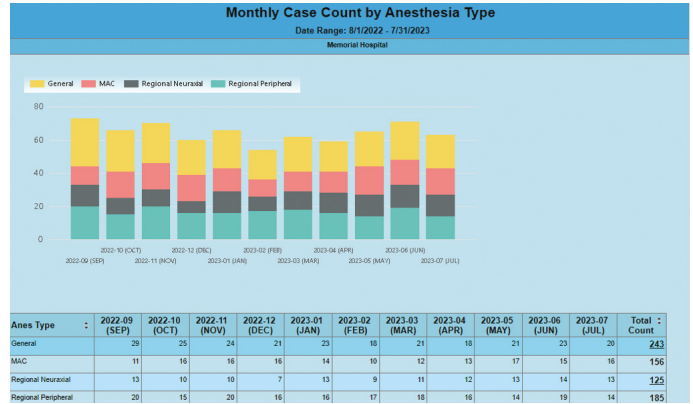

- CMS Core Measure SCIP Reports
- Controlled Substance Reconciliation Reports

**User-Friendly Report Building & Customization:** create reports independently with a variety of simplistic filtering, viewing, and sharing options. These include:

- Report Generator Tool with administrative and site manager privileges
- Multiple levels of filtering
- Global and personal report saving
- Table, graph, and summary views

**Part of a Complete Anesthesia Solution with In-Depth**

**Government Experience:** Dräger is the preeminent manufacturer of anesthesia equipment used in VA Medical Centers and DoD Military Treatment Facilities. Our high-performance anesthesia workstations provide ICU-like ventilation, patient monitoring, volatile gas analysis, automated patient charting, and seamless networking. Many VISNs have already standardized to Innovian® anesthesia record keeping (ARK) system.

Founded in 1889, Dräger is an international leader in medical and safety technology and is currently present in more than 190 countries.
