

Dräger Pack2Go® Consumables and Accessories

Freeing you of routine tasks by streamlining and facilitating your hospital processes and workflows, reducing staff stress and unnecessary costs by offering you tailor-made solutions, ultimately means you have more time to care for your patients' wellbeing and recovery. We provide you with our Pack2Go package solutions, which include all relevant accessories for your Dräger ventilation and anesthesia devices.

Benefits

Freeing you of routine tasks by streamlined processes

The high number of tasks and the high workload are only some of the challenges that you face in your daily work. We know that it is important to facilitate your processes and ensure safety at the same time. To support you, we provide you with the necessary tools to give high quality care through complete therapeutic solutions. With our Pack2Go solution you can simply order all relevant disposable accessories in one single package - by just one order number. This helps you to have all required products for a specific Dräger device available when you need them.

Patient safety is our common priority

Our common priority is to ensure the patient safety at any time. We know that uncompromising quality and functionality of medical equipment is a needed prerequisite to keep patients safe at any time. To help you achieve this goal, all our Pack2Go products are tested for compatibility with the relevant Dräger device and manufactured to meet the highest standards in medical technology.

Simplify infection prevention and hospital logistics workflows

Changing a ventilator or an anesthesia machine from one patient to another can be an immense number of different tasks and much effort to have everything you need available. This can rise the danger of transmitting contaminations from one patient to another., resulting in complicating recovery, prolonging hospital stay and rising medical costs.¹

Our Pack2Go solution can help to make this procedure easier and at the same time reduce the risk of cross contamination. All relevant disposable accessories to set up a device for a new patient come in one single package with no need to sterilize equipment or timeconsuming assembling activities. Thus making sure that only clinically clean products will be used.
