### **Maximum control in minimum time**

New breath alcohol test device Alcotest 5000

**The Dräger Alcotest 5000 is a professional alcohol measuring instrument that detects the presence of alcohol. Dräger's fastest alcohol tester allows up to twelve tests per minute. This makes it particularly suitable for large-scale police checks, entrance checks at factory gates or in stadiums, or when accessing the subway or the airport gate. In the case of a positive test result, if necessary, exact percentages can then be determined by means of Dräger alcohol test or evidential devices.**

The alcohol test is carried out without any physical contact with the test person. There is no need to fit and remove new mouthpieces as the test person simply blows into a funnel to take a sample. Thanks to its design, this special funnel stops the test person's own exhaled air from flowing back and taking in any pathogens from previous test persons. After use, the funnel attachment can be easily replaced, providing peace of mind for a hygienic solution.

#### **Easy handling, convenient overview**

With its uncomplicated, one-button operation via the OK button, the Alcotest 5000 consistently continues the proven and simple handling of the Dräger Alcotest family. Two additional arrow keys are used to navigate through the menu. Users can then, for example, see the latest test results, call up the date of the next calibration, or set an individual language for the menu. The instructions for the test procedure are language-neutral by means of a symbolic representation visible on the display.

To bridge a larger distance to a test person, for example, a truck driver in his cab, the Alcotest 5000 has a ¼" thread on the back of the device to attach a standard selfie stick to the alcohol tester. The processing of breath alcohol test can thus be accelerated.

A battery pack lasts for more than 5,000 tests, regardless of whether the device is used actively (the test person actively blows into the funnel attachment) and/or passively (e.g., measuring alcohol in the ambient air, suspected alcohol in drinks).

Dräger Safety AG & Co. KGaA is the manufacturer of the Alcotest 5000.
