Dräger DrugTest® 5000

Analysis system for detecting drugs

No pipetting, no dripping, no timing:
Not only sampling is done quickly and easily with the Dräger DrugTest® 5000. Directly afterwards, the sample also can be evaluated automatically – for reliable results on the spot.

SAMPLING AND ANALYSIS IN ONE SYSTEM

The drug analysis system Dräger DrugTest 5000 consists of the sampling system Dräger DrugTest 5000 Test Kit and of the analyzer Dräger DrugTest 5000 Analyzer. This provides you with anything you need for a first assessment on the spot.

DRÄGER DRUGTEST® 5000 TEST KIT:
EASY AND FAST SALIVA SAMPLE COLLECTION

Ready for immediate use, if necessary
The test kit provides you with a ready-for-use sampling system. You want to check a suspect person? Just remove the cover and hand the test cassette over to the test person.

Hygienic and painless:
collection without blood samples
The test person moves the top part of the collector briefly back and forth between cheek and gums for one to four minutes. Then he gives you back the test cassette – and you will not come in touch with the saliva sample.

Blue means:
sample collection finished
The end of sample collection is indicated automatically: If the collector has collected enough saliva, the indicator becomes blue. Afterwards you insert the test cassette and cartridge directly into the Dräger DrugTest 5000 Analyzer for evaluation.

OTHER ADVANTAGES OF THE DRÄGER DRUGTEST® 5000 TEST KIT:
– easy handling – with or without gloves
– suitable for left-handed and right-handed persons
– extremely low detection limit for THC as the main active ingredient of cannabis
– different configurations available (depending on design, several substances can be detected at the same time)
– can be stored in original package without any deterioration at up to 30 °C
– can be used at temperatures between 4 °C and 40 °C
DRÄGER DRUGTEST® 5000 ANALYZER

Insert test cassette and cartridge, start evaluation, ready
The saliva sample can be evaluated immediately after sample collection. Just insert test cassette and cartridge into the analyzer – the evaluation will start directly.

Easy and safe operation – even under adverse conditions
Even when it becomes hectic: you control the analyzer with only three keys. The operation is menu-driven. Just follow the plain text instructions.

Quick and comfortable: results after a few minutes
Once the device is put into operation, the analysis will run automatically. This keeps your mind clear and your hands free for attending to your test persons. After only a few minutes the result will be displayed.

Easy-to-read colour display
The colour display is illuminated. Thus, you stay on top of the situation even under reduced visibility conditions. The display text can be read without any problems even from some distance or from an angle.

Clear measuring results without interpretation
The measuring result also is displayed in full sentences. Therefore, misinterpretations do not occur.
Evaluating samples wherever the situation demands
The analyzer is operated with firmly installed, rechargeable batteries. This makes you independent from external power supply and allows you to start the analysis immediately and anywhere.

Storing 500 measuring results and managing them easily
It stores the last 500 measuring results including date and time. You can enter further measurement details via keyboard or barcode reader. You can print the results with the Dräger Mobile Printer directly on the spot. To document the data, you can transmit them on the PC via USB.

4.5 kg lightweight for transportation
The analyzer is easy to carry. For transporting the device and its accessories easily and safely, Dräger provides a matching carrying bag or a robust transport case.

OTHER ADVANTAGES OF THE DRÄGER DRUGTEST® 5000 ANALYZER:
- integrated self-test function:
  - no semi-annual calibration necessary
- a variety of accessories (e.g. carrying bag, battery charger or compact keyboard)

THE FOLLOWING EXAMPLES OF DRUGS AND PHARMACEUTICALS CAN BE DETECTED WITH DRÄGER DRUGTEST® 5000:
- Amphetamines
- Benzodiazepines
- Delta-9-tetrahydrocannabinol
- Cocaine
- Methamphetamines
- Opiates
- Methadone
DRÄGER DRUGTEST® 5000

- Remove the cover
- Pass test cassette on to test subject

- Test subject moves the collector back and forth in his mouth until the indicator becomes blue

- Insert test cassette and cartridge into the analyzer. The analysis will start automatically
- After a few minutes, the result will be displayed
**Dräger SSK 5000:**
Detecting drugs on surfaces or in substances
You would like to evaluate a sample from, for example, a steering wheel or a bank note right on the spot? Take a sample with the sample collector Dräger SSK 5000 and just transfer it onto the sample collector of the Dräger DrugTest 5000 Test Kit. Then, you can analyze the sample with the Dräger DrugTest 5000 Analyzer.
TECHNICAL DATA

Operating voltage 12 V direct voltage (via supplied power pack)
Power input normally 3 A
Dimensions (W*H*D) 200 * 260 * 250 mm
Weight 4.5 kg
Operating range Operation: 4 °C to 40 °C
Storage / transportation: -20 °C to +60 °C
relative humidity 5 to 95 % (non-condensing)
Ports optical for printer, PS/2, USB Slave
Time of measurement depending on used test kit (typically < 9 minutes)
Storage capacity 500 records or measurements
