Dräger Interlock® - On the road with confidence
Minimise risks caused by driving under the influence of alcohol

In the workplace it is particularly important to systematically eliminate the risks posed by driving under the influence of alcohol. This increases the safety for employees, passengers and other road or workplace users.

INTRODUCING THE DRÄGER INTERLOCK®

The Dräger Interlock® is a breath alcohol measuring device with an automatic vehicle immobiliser that prevents drivers under the influence of alcohol from starting their vehicle.

The Dräger Interlock® reliably measures the alcohol concentration in the breath of the driver and only allows the engine to start if the breath test is below the preset limit.

The Dräger Interlock® helps to systematically reduce alcohol-related accident risks.

With increased safety for companies, it helps to prevent personal injuries and will safeguard the reputation of your company and potential liability costs.
Reliability you can count on

SO HOW DOES THE DRÄGER INTERLOCK® WORK?
The Dräger Interlock® consists of two components: the handset and the control unit. The breath sample is analysed in the handset.

The control unit releases or blocks the starter relay of the vehicle. If the device detects an alcohol value above the set limit, it prevents the engine from being started.

The extremely quick start up start-up time is one of the major benefits of the Dräger Interlock®. With an approved temperature range of -45 °C and 85 °C, it ensures that the device works reliably under all kinds of ambient conditions.

WHERE WOULD A DRÄGER INTERLOCK® BE USED?
Alcohol Interlocks can be installed in various vehicles to safeguard against driving under the influence of alcohol.

Whether in a car, truck, bus or machinery – the device ensures that no driver, who is under the influence of alcohol, can start the vehicle and enter public roads or a work space.

A Dräger Interlock® can also help to systematically reduce risks of alcohol-related accidents in forklifts, cranes or other special purpose vehicles.
Passenger Transportation
The Dräger Interlock® prevents personal injury or damage to property caused by alcohol related accidents in e.g. buses, taxis and trains including the resulting costs and reputation of your company.

A safe environment will make passengers feel at ease knowing that the driver is being monitored and alcohol-free.

Freight Transportation
The Dräger Interlock® allows you to manage your mobile fleet by monitoring the individual driver and their compliance with existing alcohol policies. The device can be connected to a fleet management system to ensure real-time data is provided to the owner or the OHS Manager of the company. It prevents personal injury or damage to property caused by alcohol related accidents in e.g. trucks and vans including the resulting costs and reputation of your company.

Fleet Vehicles
The Dräger Interlock® allows companies the option to manage fleet vehicles by monitoring the individual driver and their compliance with existing alcohol policies. Alternatively it can be fitted as a safety precautionary measure by preventing the driver from starting the vehicle above a pre-set blood alcohol limit.

It prevents personal injury or damage to property caused by alcohol related accidents including the resulting costs and reputation of your company.
Machinery & Special Purpose Vehicles

The Dräger Interlock® allows you to manage your machinery and/or special purpose vehicles by monitoring the individual driver and their compliance with existing alcohol policies. It prevents personal injury or damage to property caused by alcohol related accidents in e.g. forklifts, cranes or mine vehicles including the resulting costs and reputation of your company.

Private Industry & Personal Use

The Dräger Interlock® can be fitted as a safety precautionary measure by preventing the driver from starting the vehicle above a pre-set blood alcohol limit. This safety feature may help families to feel at ease knowing that their loved ones are alcohol-free whilst driving and are protected from alcohol related accidents and injuries.

Drink Driving Offender Programs

The Dräger Interlock® is used in all existing Alcohol Interlock Programs in Australia and New Zealand. If you have had a drink driving offence and require an alcohol interlock to be fitted, contact Dräger Safety Pacific on 1300 780 689.
Simple & easy to use

HOW THE DRÄGER INTERLOCK® WORKS

1. Switch on ignition.
2. Request to submit breath sample.
4. Breath sample accepted: Starter is released.
5. Start engine.
Accurate & reliable testing instruments

DRÄGER INTERLOCK® DEVICES
The Dräger Interlock® is connected to the ignition of the vehicle and the driver is required to present a breath test every time an attempt is made to start the vehicle. If alcohol is detected over a certain specified level, the vehicle will not start.

Dräger Interlock® 7000
• High measurement accuracy (similar sensor technology as police devices)
• Very reliable
• Immediate start-up time and rapid test results
• Unique mouth alcohol detection feature
• Easy to use: Easy and intuitive navigation with full text colour display
• Power consumption: <2 A maximum, <1 mA stand-by
• Data storage: up to 500,000 events
• Camera module available (optional)
• Customised programming available
• Can be easily connected to an existing Fleet Management System

Dräger Interlock® XT (refurbished)
• High measurement accuracy (similar sensor technology as police devices)
• Very reliable
• Fast start-up time
• Easy to use: 3-button operation with LC display
• Power consumption: <2 A maximum, <20 mA stand-by
• Data storage: up to 31,000 events
• Customised programming available
• Can be easily connected to an existing Fleet Management System
