Cleaning of breathing apparatus and CPS
Cleaning, Desinfecting and Drying

Ready for the next application: Breathing apparatus, chemical protection suits (CPS) and other sensitive equipment items have to be cleaned and disinfected using the right agents.
Benefits

Manual cleaning

Sekusept® Cleaner is an agent for the manual cleaning of breathing apparatus and chemical protection suits before disinfection. The agent offers a very high cleaning power and compatibility of materials; furthermore, it is optimally suitable for use with the disinfectant Incidur®.

Machine cleaning and disinfection

Using the detergent-sanitizer Eltra®, breathing apparatus and chemical protection suits can be cleaned and disinfected in washing machines at the same time. Additionally, the agent is suitable for machine cleaning and disinfection of various types of equipment, such as rubber boots and gloves, contamination protective hoods and suits as well as for the disinfection and washing of white and colored textiles made of cotton, synthetic and mixed fabric.

Manual disinfection

The disinfectant Incidur® can be used for the disinfection and cleaning of metals, elastomers and of stress crack-sensitive plastics such as polycarbonate and polymethacrylate (acrylic plastic, Plexiglas) and is particularly suited for the cleaning of breathing apparatus and chemical protection suits (CPSs). The sanitizer wipes Incides® N are ideally suitable for the rapid cleaning of metal and plastic items as well as of alcohol-resistant surfaces. The wipes are ready for use and offer an especially short disinfection time as well as a wide range of effectiveness against bacteria, fungi and viruses.

Cleaning in the DRTK

The combined cleaning agent and disinfectant Sekumatic® FDR with the patented agent glycoprotamine ensures a good cleaning performance and secure disinfection in the temperature range of up to 60 °C. The agent is particularly suitable for use in the disinfection, cleaning and drying cabin (DRTK).
Cleaning working clothing

Work clothing is often exposed to extreme conditions. To be ready and well prepared for the next use, the clothes have to be cleaned and disinfected using the right agents.

Personal hygiene

Tough against bacteria – but soft on your skin. The gentle cleaning, disinfecting and care products protect the skin even if used frequently.

Cleaning of test devices and surfaces

Hygienic and clean: Special cleaning agents and disinfectants for all kinds of surfaces ensure sterile working environments.

Complete respiratory protection workshop

Dräger offers the full service. We plan your respiratory protection workshop in accordance with your requirements, supply all components and hand over your new workshop ready for use.
