

## Linea Flush Flush-fitting wall supply unit

Universally suited wall supply unit, including special requirements in the widest variety of areas. The space-saving design enables the unit to be used for a variety of areas beyond or in addition to conventional wall supply units.

## Benefits

---

### Solutions for you and your patients

Dräger's Linea Flush wall supply unit is a member of the Linea product family. It is designed to make routine work more efficient whilst enhancing the feel-good factor for patients (healing environment), visitors and staff. The main features of this product family are that the components can be customised to suit the existing infrastructure, there are a wide range of design options available and all products and accessories are fully compatible with one another.

---

### Modular and space-saving

The Linea Flush is installed flush with the wall and can be arranged either horizontally or vertically. This makes it an ideal and economical choice when space is limited or as an addition to existing medical supply units. The Linea Flush is available with a choice of up to three rows of outlets. They can be equipped with gas, power and data outlets according to your specific requirements. The Linea Flush can be supplied in any desired length up to four metres, so that its size can be suited to the exact number of outlets you need and to fit into the space available.

---

### Discreet and functional

Colours can enhance the well-being of patients and thereby promote the healing process and create a positive environment for clinical staff. The Linea Flush is available in a range of RAL colours. Alternatively, the service plates can be finished with a wood decor which can create very discreet and elegant units. The flush-fitting installation in combination with perfectly integrated media terminals ensure maximum safety, ease of cleaning and hygiene. This allows the Linea Flush to be unobtrusively integrated into existing interior designs and colour schemes.

---

### Supplementary illumination concepts

The Linea Flush can be fitted with a night light or combined with an external illumination unit (e.g. Linea Living) to provide more sophisticated illumination. This makes a wide range of illumination options (indirect illumination, reading light and night light) possible.

## Details

D-49021-2015

Linea Flush in combination with Linea Living

D-4121-2016

Selection of available wood decors for the service plates
