Dräger Mova® Cart 2.0
Medical Supply Units

With Mova Cart, you are choosing a mobile, flexible and safe workplace concept. Streamline your workflow and reduce the workload on your operating room and intensive care staff with an efficient and highly mobile device transport and docking system.
Benefits

Be mobile

Configure your equipment and accessories on the Mova Cart specific to the various treatments carried out: this way your equipment can be used flexibly throughout the hospital – right up to the patient’s bed. The mobility gained through the Mova Cart provides for an optimal use of your equipment park. By combining the Mova Cart with Dräger ceiling supply units (e. g. Movita), you are ensured easy and uninhibited positioning of equipment within the room.

Special feature: The Mova Cart lift offers the option of raising the equipment off the floor!

- Easy but safe mounting system
- Cart can be raised 60 cm off the floor
- Correct positioning at the required work height
- Improved hygiene
- Fast and direct connections to all electrical and gas outlets
- avoiding long cables and hoses
- reducing tripping hazards
- offering increased safety, especially during repositioning

Safe and tidy

When raised, the Mova Cart lift allows for quick and thorough floor disinfection: Tripping hazards, caused by cables and hoses lying on the floor, are now a thing of the past. Also a great advantage when repositioning the ceiling supply units. The risk of accidental disconnection is reduced and continuous connection is ensured. The same applies to the docking version, where the Mova Cart is not lifted but rolled along the floor together with the supply unit as a single unit.

Your complete endoscopic or MIS equipment can be optimally arranged on the Mova Cart lift: You have a choice of two widths – 701 mm or 880 mm. Handling of the Mova Cart lift in connection to a Dräger ceiling supply unit is easy:

The Dräger lifting system ensures a quick and safe mounting of the Mova Cart lift onto the ceiling supply unit. Using the side handles, the cart can be positioned against the supply unit. The tapered mounting pins help to position the coupling system correctly. A special magnetic and mechanical safety system provides for precise connection and prevents accidental disconnections of the cart.

Mova Cart lift can be positioned at an ergonomic working height for the convenient and safe operation of your OR equipment. To reduce OR set-up times, especially in multifunctional ORs, we offer Mova Cart with MediaDocking®.

With the MediaDocking option, gases and power supply, as well as video and data cabling, are connected automatically to the ceiling-mounted supply unit via mechanical coupling. This eliminates timeconsuming connection of hoses and cables during OR rotations.
**Benefits**

The smaller Mova Cart is ideal for setting up your ventilation area with a flexible cart. Hemodynamic monitoring can be positioned ergonomically directly above the cart on the Movita Column or Movita Rack.

The Mova Cart is perfectly matched with the Dräger Evita and Babylog ventilator series. Naturally, other ventilators can also be integrated into the system.

The Mova Cart can be attached to the supply unit in two different ways:

- **Lifting:** The Mova Cart lift can be mounted onto the ceiling supply unit quickly and safely. The coupling mechanism ensures secure lifting of the equipment cart by the ceiling supply unit. An alternative to the lifting is the docking-system:
- **Docking:** Using the side handles, the cart can be positioned against the supply unit. The Mova Cart locks onto the front rails of the column and is immediately docked to the supply unit. The cart is now moved as one unit with the supply unit. By pulling a knob on the front of the Mova Cart, it can quickly be disconnected.

**Mobility**

The Mova Cart / supply unit system guarantees an especially easy positioning of the ventilation equipment. Also as docking version, safe connection to the gas and electrical supply is ensured and cannot be disconnected accidentally.

**System components**

**MediaDocking**

Enabling quick and safe changes in OR-configuration. In times of limited hospital budgets, you need new OR concepts to efficiently handle the growing number of patients. Flexibility in OR configuration is essential in improving efficiency.
