Dräger offers a wide selection of single patient use and reusable skin-temperature probes for adults and children. We also offer optional corresponding adapters that are compatible with the temperature connection cables of other patient monitors to standardise your workflow.

HEIGHTENED PATIENT COMFORT
Dräger temperature probes are made solely from skin-friendly material and have smooth edges and transitions which help reduce the risk of injuries and offer enhanced patient comfort. All this helps in heightening the patient’s overall wellbeing.

BETTER PROTECTION AGAINST INFECTIONS
Hygiene and protecting against possible nosocomial infections are a central part of your daily work. This is why we help support you in these areas with innovations such as single patient use temperature probes, which help you to reduce the risk of nosocomial infections. This not only makes complying with all hygiene regulations easier, but also simplifies the care process and reduces costs involved in treating such incidents.

SIMPLIFIED WORKING PROCESSES AND COMPATIBILITY
All Dräger temperature probes are tested and validated for use with our Dräger Infinity® monitoring systems.

In order to make your working process as easy as possible, you can now take the temperature probes from one ward to another and connect it to the next monitor. When you arrive at the next ward, simply connect the Dräger temperature probe.

The Dräger adapters are compatible with the Dräger temperature probes and the specified temperature connection cables of other vendors.

DRÄGER ONE-STOP SHOP FOR TEMPERATURE PROBES
The Dräger temperature probe portfolio supports you in your daily work by:
- standardising the temperature probes at your hospital
- combining purchasing orders and reducing process costs
- increasing protection against infections and the reduction of treatment costs via single patient use temperature probes
- testing and validating accessories
